

World Meteorological Organization

Working together in weather, climate and water

WMO and CGMS Involvement in Space Weather

Jérôme Lafeuille
WMO Space Programme,
Geneva

Acronyms

- WMO: World Meteorological Organization
- CGMS: Coordination Group for Meteorological Satellites

Outline

- **Why should WMO be involved in Space Weather ?**
 - Is there any interest for WMO to engage in space weather?
 - Is there interest for space weather to engage WMO?
- **WMO activities in space weather**
 - Observation, data exchange
 - Products and services
- **CGMS potential activities in space weather**
- **Conclusions**

World Meteorological Organization in a nutshell

The specialized United Nations agency for meteorology (weather and climate), operational hydrology and related geophysical sciences.

- protection of life and property
- poverty alleviation and economic growth
- sustainable use of natural resources
- environmental quality

WMO Members include 185 States + 6 territories represented by the Head of their Met Service

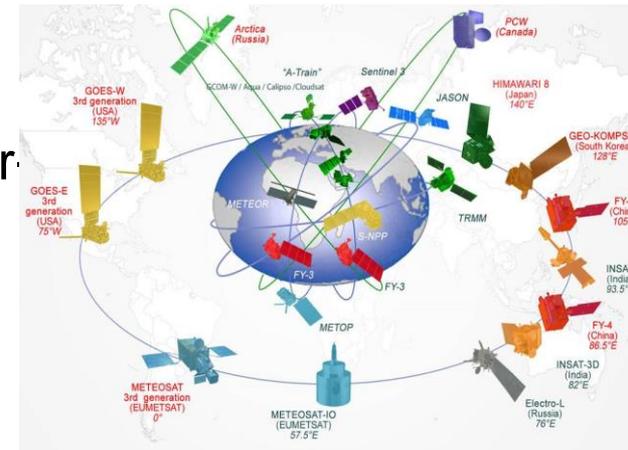

WMO headquarters
Geneva, Switzerland

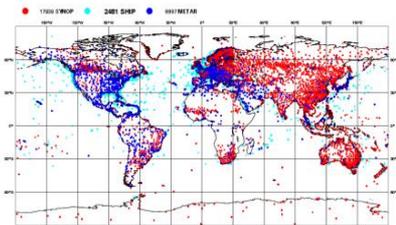

WMO Global Observing Systems (1)

➤ Global Observing System of the World Weather Watch (WWW/GOS)

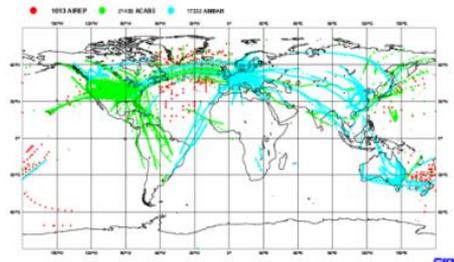

- Space-based observing system (Serving all WMO applications)
- RBSN, RBCN (>10,000 stations, 1,000 upper)
- AMDAR (39754/day)
- Ship & Marine obs (30417/day)
- Surface-based remote sensing
- Meso-scale networks

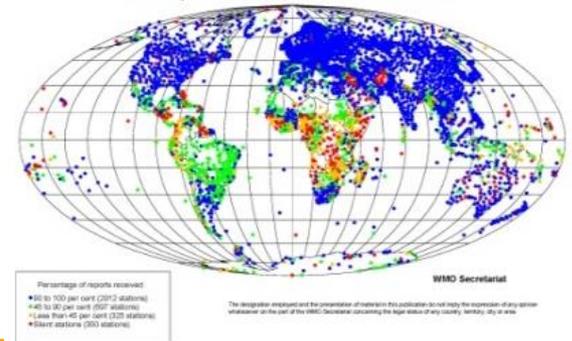

ECMWF Data Coverage (All obs DA) - SYNOP/SHIP
19/APR/2010; 00 UTC
Total number of obs = 30417

ECMWF Data Coverage (All obs DA) - AIRCRAFT
05.NOV/2009; 06 UTC
Total number of obs = 39754

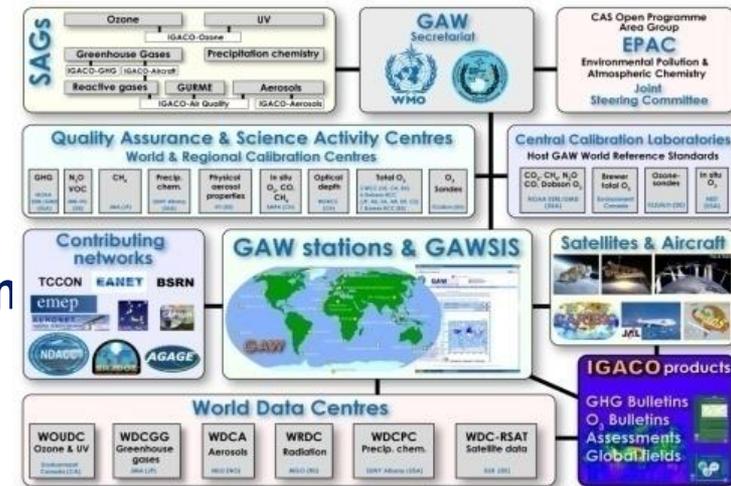

Annual Global Monitoring 1-15/10/2008
SYNOP reports made at 00, 06, 12 and 18 UTC at RBSN stations

WMO Global Observing Systems (2)

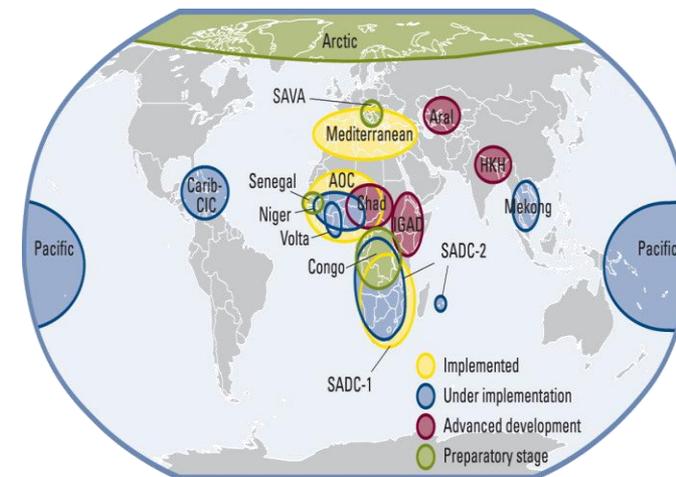

- Global Atmosphere Watch (GAW)
- World Hydrological Cycle Observing System (WHYCOS)
- WMO Co-sponsored Observing System
 - GCOS, GOOS, GTOS
- Striving for integration of these different systems

Argo Network, as of April 2005

1811 Active Floats

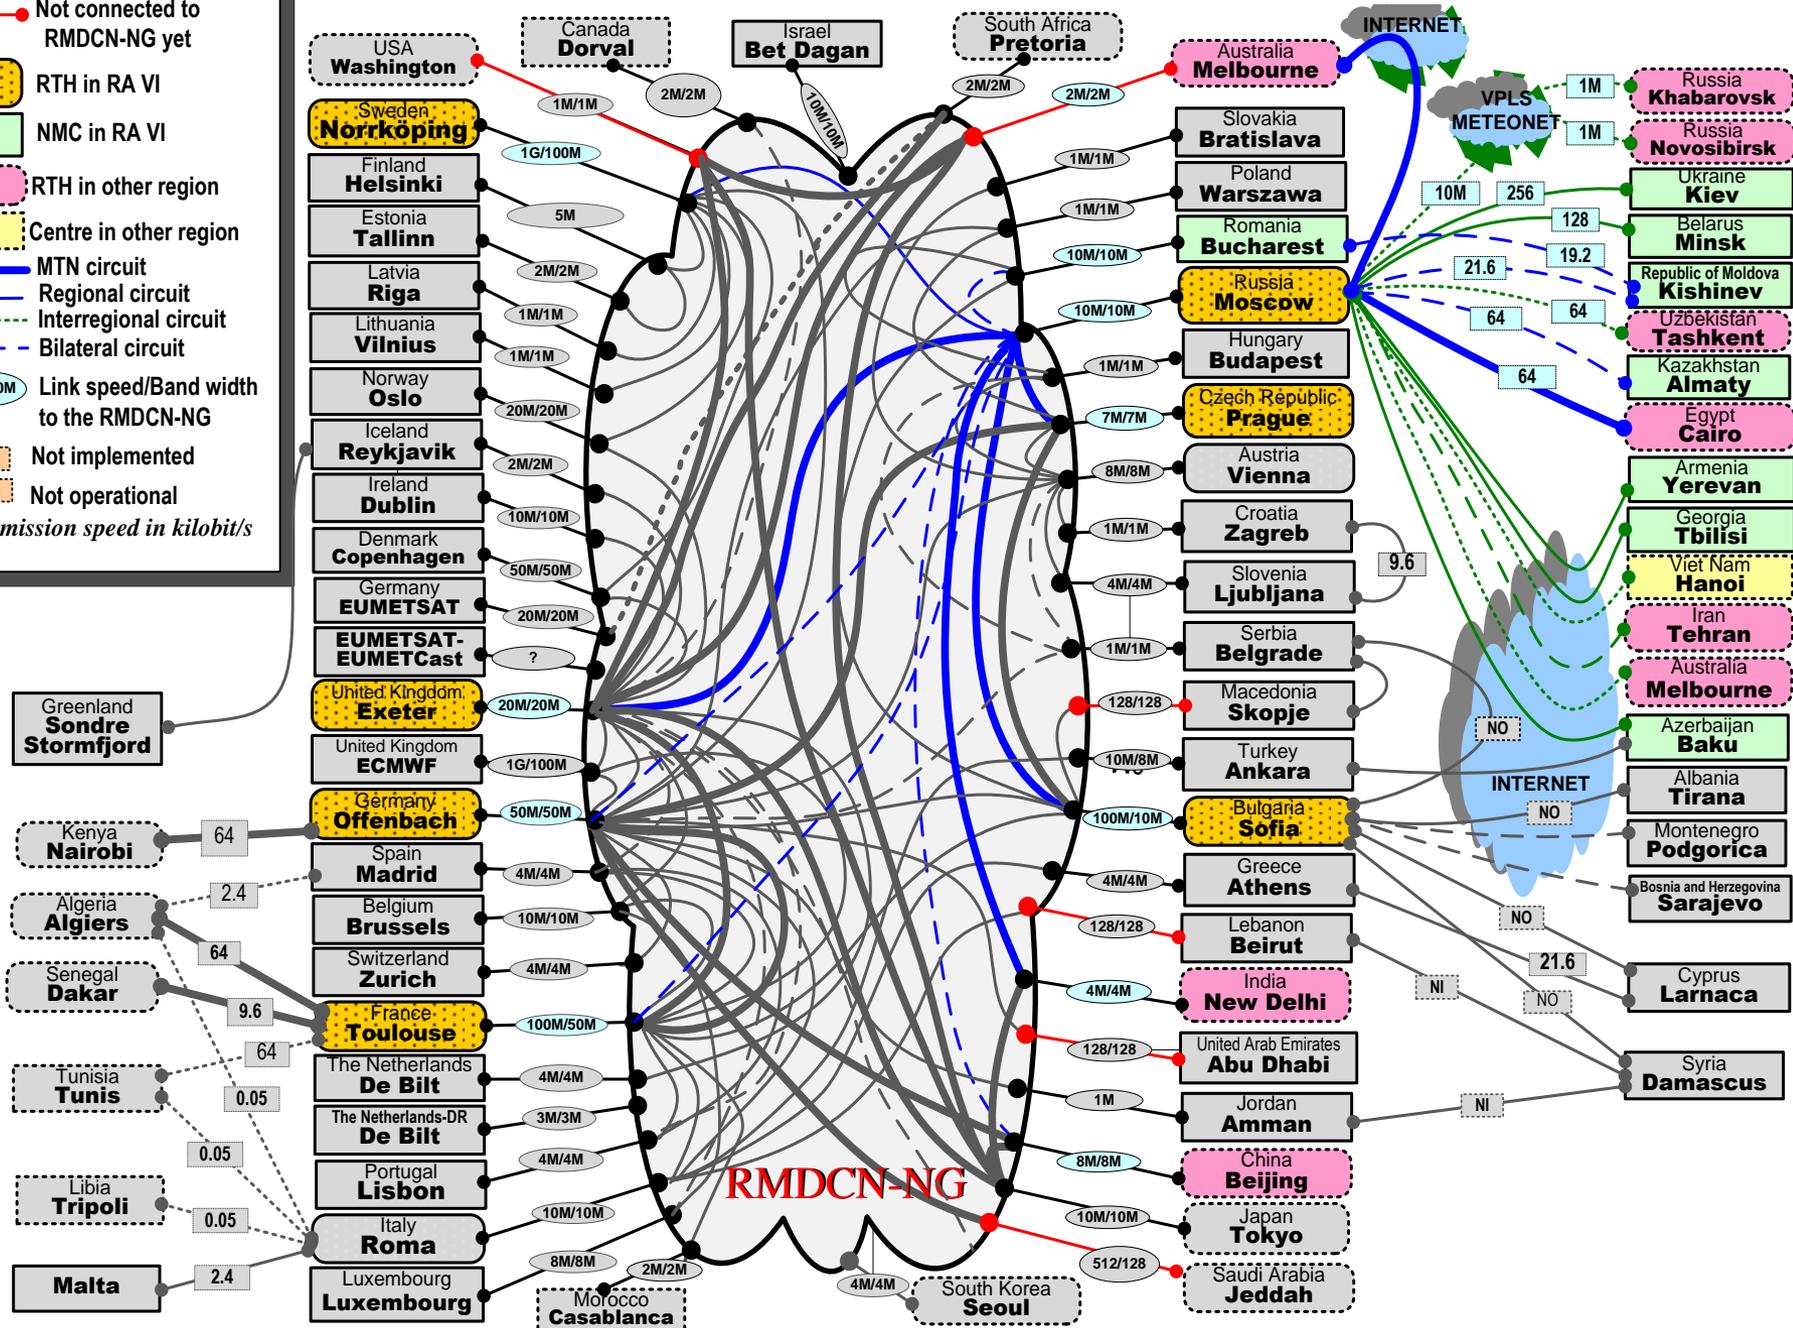

- AUSTRALIA (56)
- GERMANY (112)
- MAURITIUS (2)
- CANADA (75)
- INDIA (40)
- NETHERLANDS (3)
- CHINA (11)
- IRELAND (1)
- NEW ZEALAND (5)
- EUROPEAN UNION (30)
- JAPAN (284)
- NORWAY (8)
- RUSSIAN FED. (4)
- FRANCE (112)
- KOREA (53)
- SPAIN (10)
- UNITED KINGDOM (84)
- UNITED STATES (923)

Regional Telecommunication Network (Europe)

- Not connected to RMDCN-NG yet
- RTH in RA VI
- NMC in RA VI
- RTH in other region
- Centre in other region
- MTN circuit
- Regional circuit
- - - Interregional circuit
- - - Bilateral circuit
- 1G/200M Link speed/Band width to the RMDCN-NG
- NI Not implemented
- NO Not operational

Transmission speed in kilobit/s

RMDCN-NG

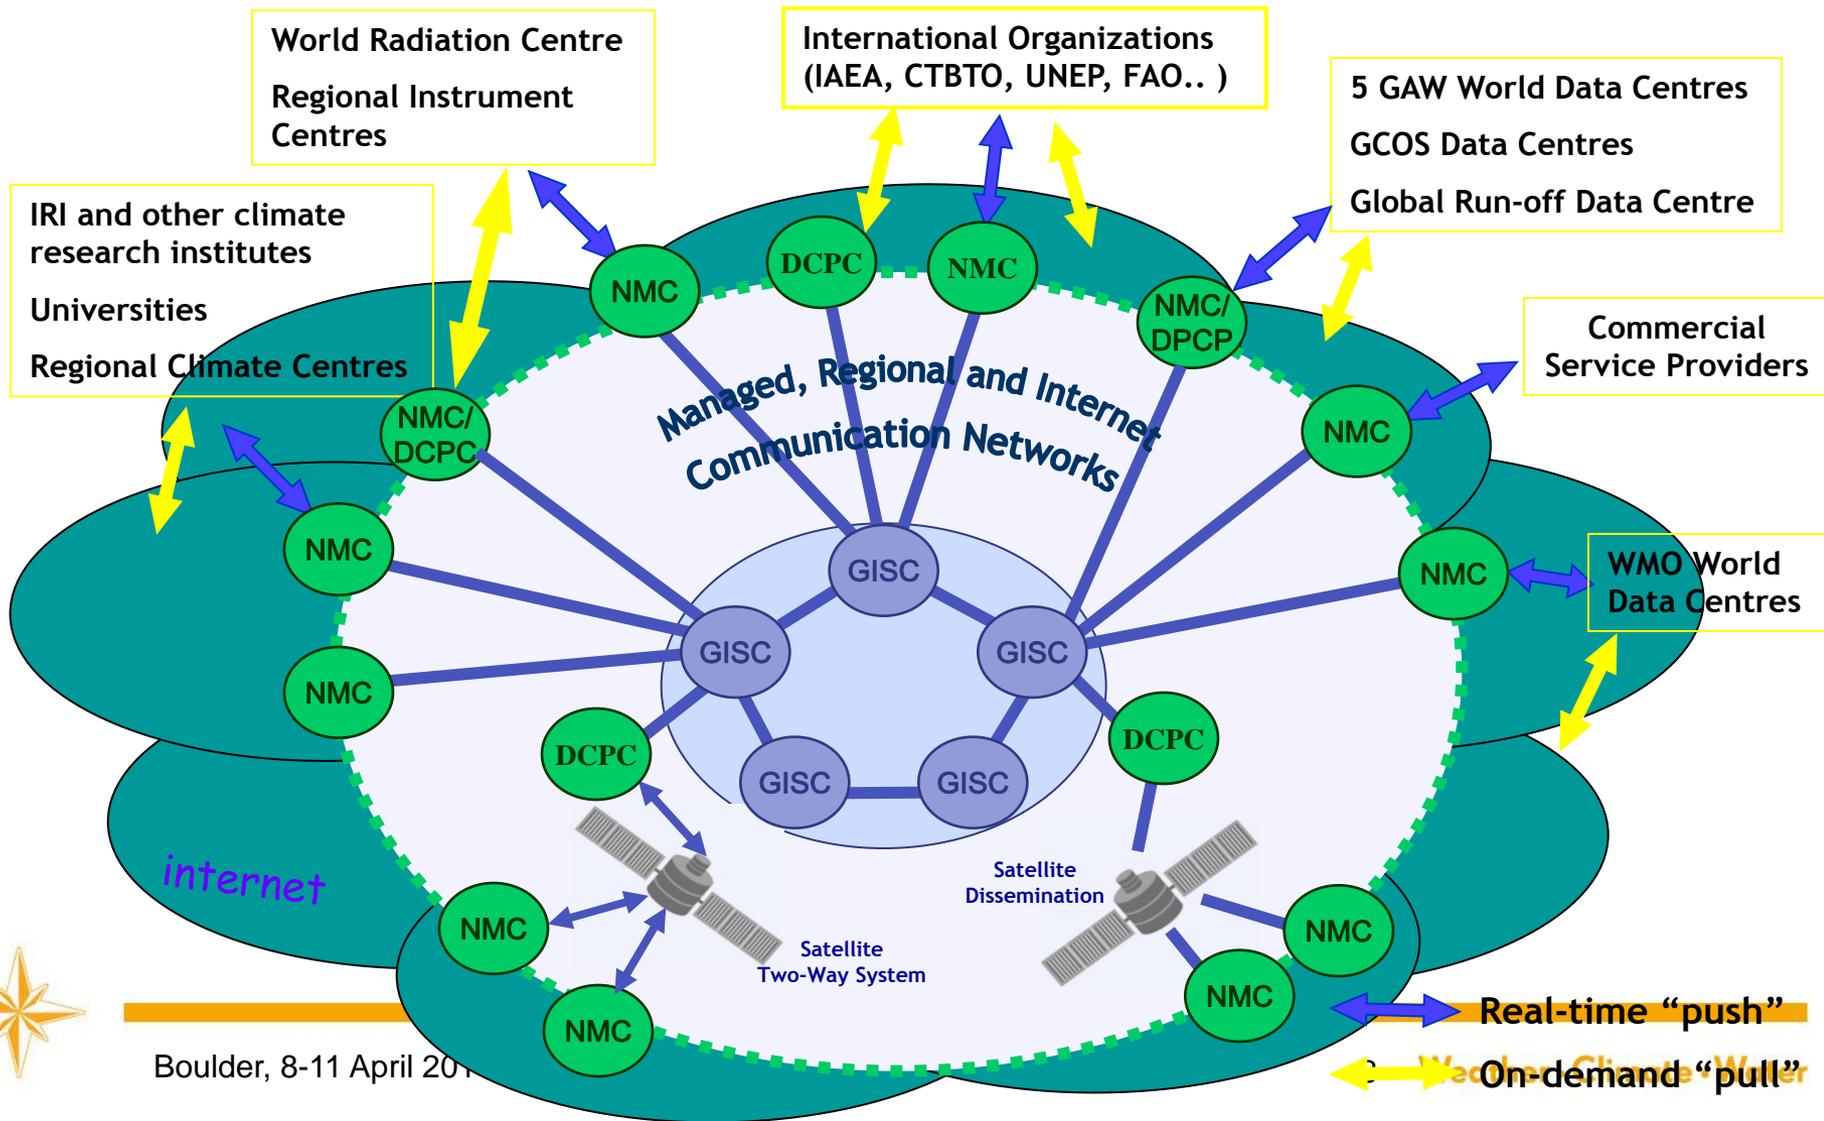

INTERNET

VPLS
METEONET

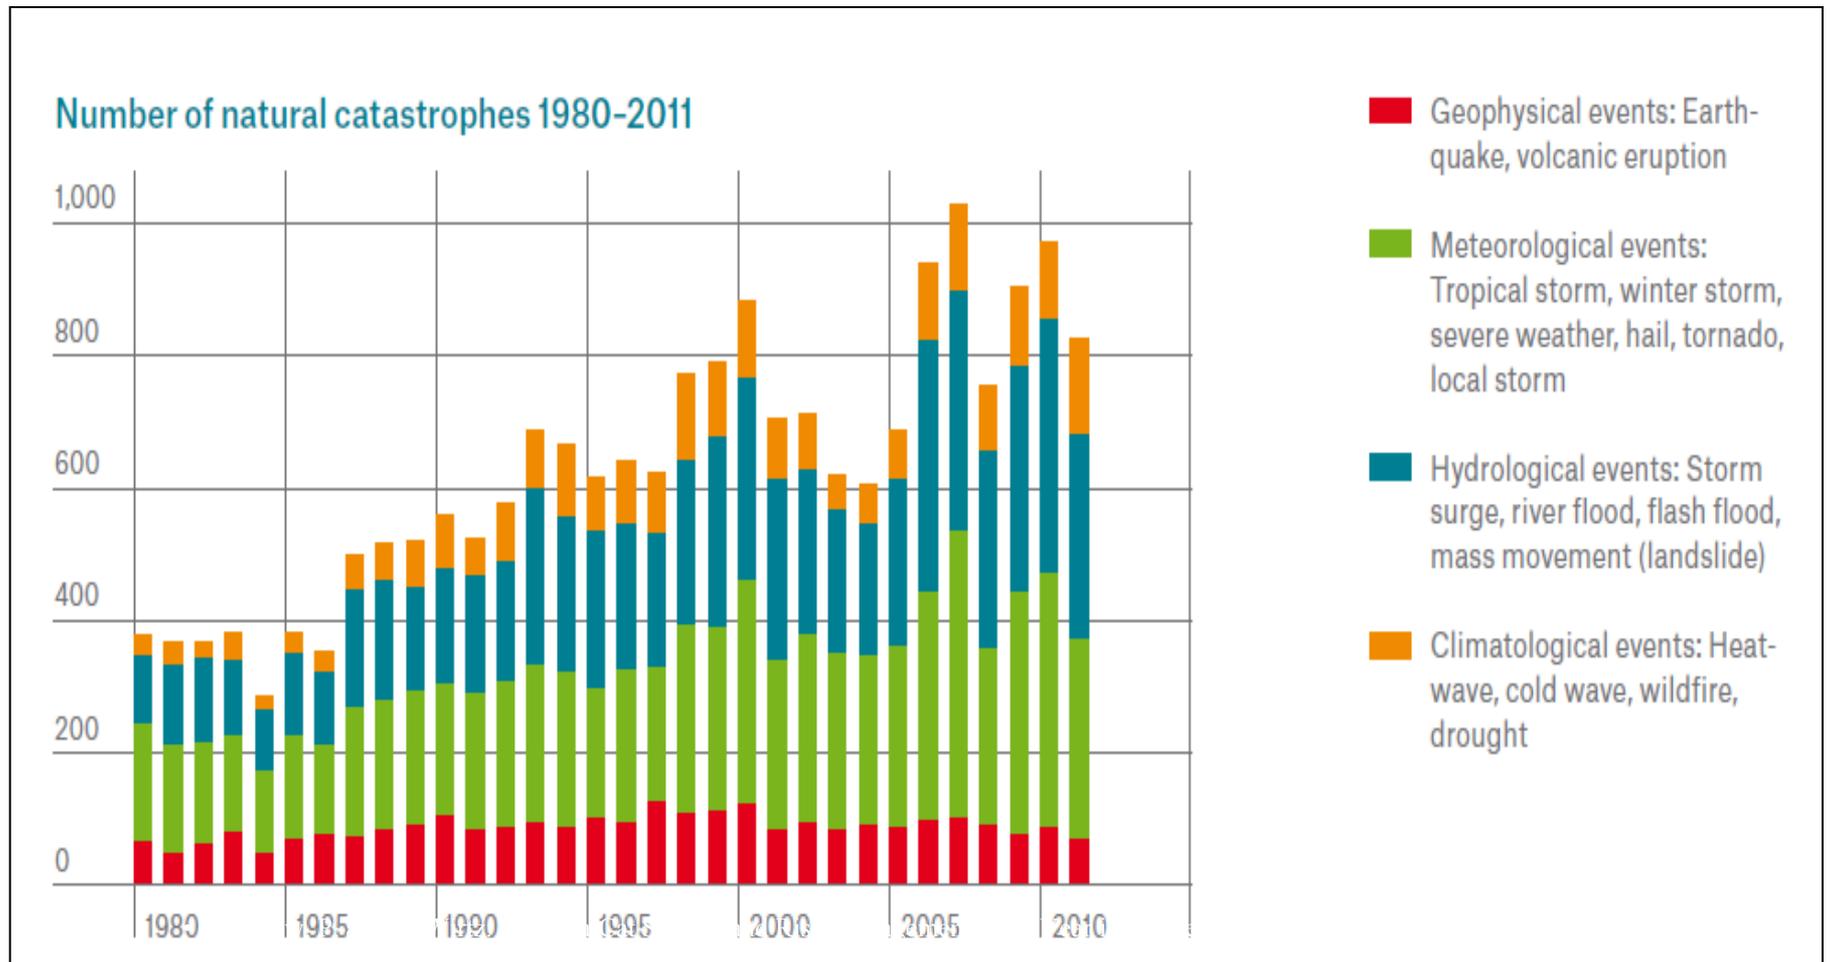

WMO Information System (WIS)

Information exchange – common procedures; real-time and non-real time

Information management – a few standard data formats; coordinated metadata and catalogues

Natural disasters 1980-2011: 90% of the disasters are hydro-meteorological events

Is WMO interested in space weather ?

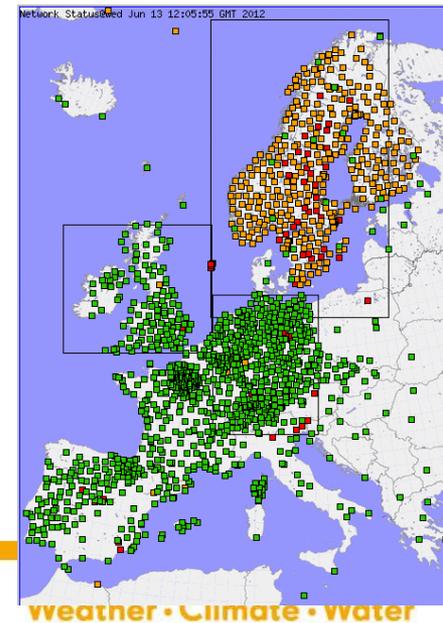

- Space weather affects meteorological activities
 - Impact on meteorological satellites (90% of observ)
 - Impact on radio-communications used in daily operations
 - Coupling between ionosphere and neutral atmosphere
 - Potential impact on climate
- User or active player ?
- WMO priorities (2012-2015 Strategic Plan)
 - *Global Framework for Climate Services*
 - *Disaster Risk Reduction*
 - *Integration of global observing and information systems*
 - *Aeronautical Meteorology*
 - *Capacity development*

Can WMO help space weather ? (1)

- To evolve towards fully operational scale
 - Permanent, sustainable, quality-controlled services
 - Delivered to a global audience
 - Globally coordinated within intergovernmental commitments
- WMO's 60-year experience in operational coordination of observation, data exchange, forecasting, warning
 - Global Telecommunication System, WMO Information System...
 - Best practices
 - Dual use of some observations (GNSS)

E-GVAP network

Can WMO help space weather ? (2)

- Key application sectors interested in WMO taking an active role to allow integration of services
 - Global aviation (ICAO-WMO)
 - Emergency management (Multi-hazard warning)
 - Probably others
 - Energy, ground transportation, off-shore...

Decisions by WMO Executive Council and Congress

- In 2008 the Executive Council agreed to set up a an expert team for initial activities in cooperation with ISES, ICAO, ITU, UN (COPUOS)
- In 2011 WMO Members (WMO Congress) confirmed the decision to engage in « **international coordination of *operational* Space Weather observation, products and services, in particular to protect against global space weather hazards** ».

WMO's activities in Space Weather

Inter-Programme Coordination Team on Space Weather (ICTSW)

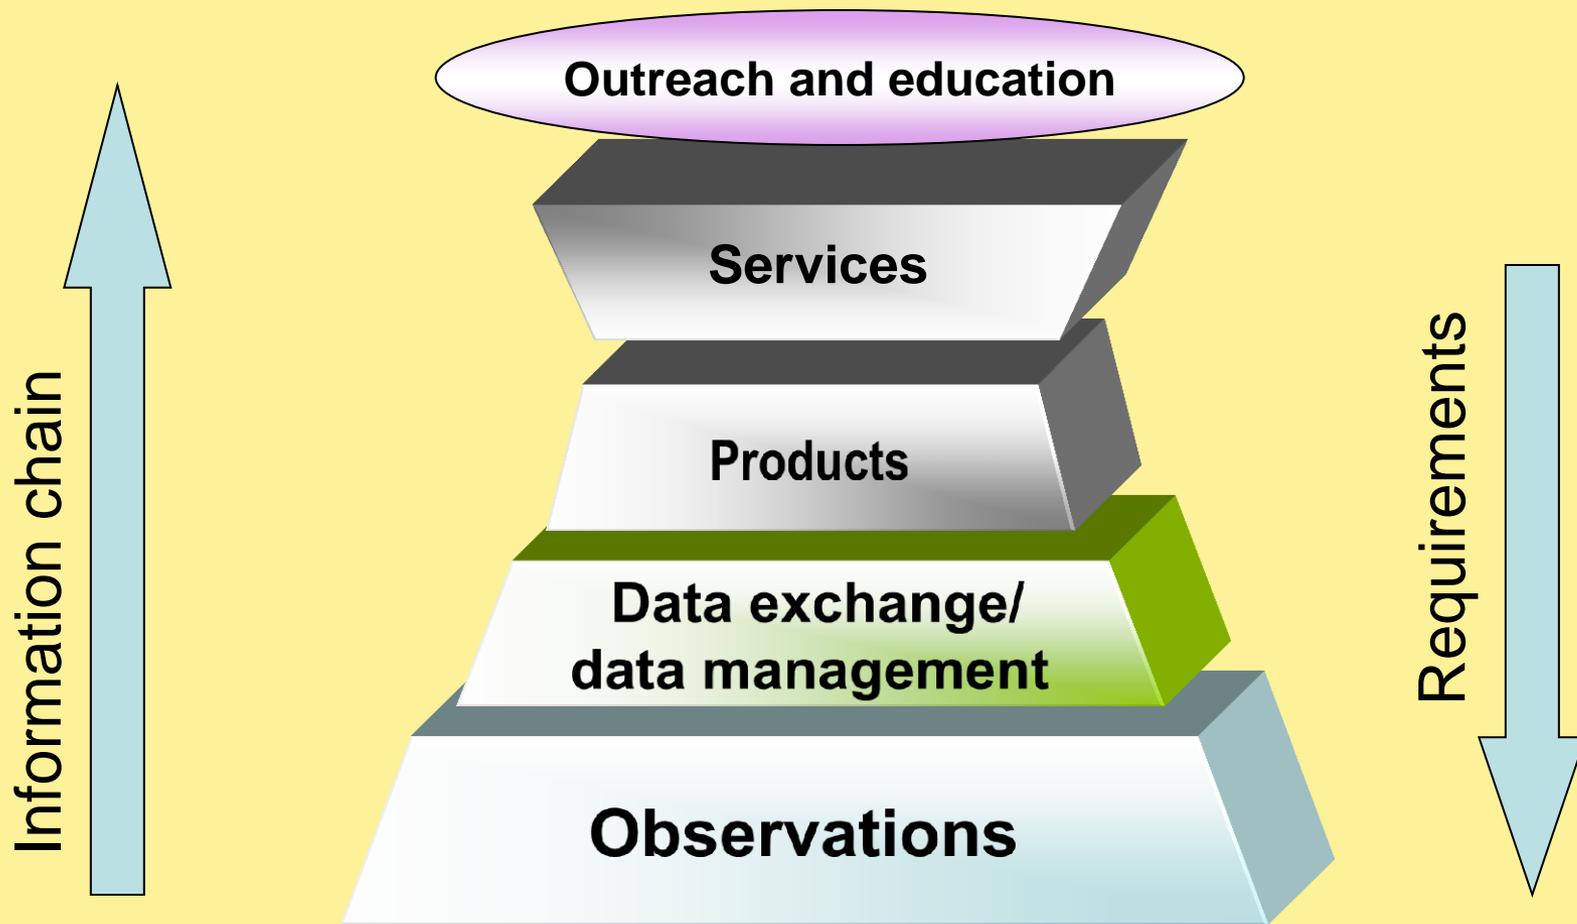

- Currently 23 countries
 - Australia, Belgium, Brazil, Canada, China, Ethiopia, Finland, France, Germany, Italy, Japan, Norway, Pakistan, Rep. Korea, Russian Federation, South Africa, Spain, Switzerland, Thailand, United Kingdom, USA
- 7 international organizations
 - ESA, ISES, EU/JRC, ICAO, ITU, UN-OOSA, WMO
- Co-chairs
 - **Terrance Onsager** (USA)
 - **Xiaoxin Zhang** (China)
- Governance
 - Commission for Basic Systems
 - Commission for Aeronautical Meteorology

- Mike Terkildsen
- Ronald Van der Linden
- René Warnant
- Clezio de Nardin
- Joaquim Costa
- Larisa Trichtchenko
- Jingsong Wang
- Xiaoxin Zhang
- Alain Hilgers
- Yitaktu Tesfatsion
- Neil Mitchison
- Kirsti Kauristie
- Nicole Vilmer
- Raul Romero
- Sergio Buonomo
- Daniele Biron
- Bruno Zolesi
- Mauro Messeroti
- Mamori Ishii
- Pal Brokke
- Hans Haubold
- Kichang Yoon
- Hyesook Lee
- Muhammad Ameen
- Vyachesloav Burov
- Lee-Anne McKinell
- Werner Schmutz
- Consuelo Cid
- Wirat Waranuchit
- David Jackson
- Joe Davila
- Mangala Sharma
- Terry Onsager
- Jerome Lafeuille

ICTSW intended activity areas

ICTSW activities / Space weather observations

- Review observation requirements and capabilities
 - Requirements database
 - Inventory of space-based observing capabilities
 - Statement of guidance (observation gaps and priorities)
- Advocacy for continuous key space weather observations
 - WMO Implementation Plan for Global Observing Systems
 - Mobilizing CGMS
 - Acknowledged in radio-frequency management discussions
- **Not yet addressed**
 - Interoperability (harmonizing measurement specifications, inter-comparison and calibration)

Rolling Review of (observation) Requirements . OSCAR database (<http://www.wmo.int/oscar/>)

Repository of
observation
requirements
and capabilities

>500 satellites
>800 instruments

*Note: the Space
Weather part of the
database is still under
construction and review*

The screenshot shows the OSCAR database interface for the MHS instrument. The page is titled 'Instrument: MHS' and contains several sections:

- Instrument details:** A table with fields for Acronym (MHS), Full name (Microwave Humidity Sounding), Type of Instrument (07_MW sounding radiometer, cross-track scanning), Purpose (Humidity sounding in almost all-weather conditions. Also precipitation rate), Short description (5-channels, 183 GHz band [see detailed characteristics below]), Background (Replacing AMSU-B on NOAA 15/16/17. MHS is part of the ATOVS sounding instrument suite (Advanced TIROS Operational Vertical Sounder)), Scanning Technique (Cross-track: 90 steps of 16 km s.s.p., swath 2180 km - Along-track: one 16-km line every 8/3 s), Resolution (16 kmIFOV), Coverage / Cycle (Near-global coverage twice/day), and Mass (63 kg, Power 93 W, Data Rate 3.9 kbps).
- Providing Agency:** EUMETSAT, Utilization Period: 2005-2021, Last update: 2012-09-07.
- Detailed characteristics:** A table with columns for Central frequency (GHz), Bandwidth (MHz), Polarisation, and NEΔT.

Central frequency (GHz)	Bandwidth (MHz)	Polarisation	NEΔT
89.0	2800	V	0.22 K
157.0	2800	V	0.38 K
183.31 ± 3.0	2000	H	0.42 K
183.31 ± 1.0	1000	H	0.57 K
- Satellites this instrument is flying on:** Lists satellites like MetOp-A, MetOp-B, MetOp-C, NOAA-18, and NOAA-19 with status tags (red for non-operational, green for operational, blue for future).
- Contribution to Space Capabilities:** Lists capabilities such as 'MW temperature/humidity sounding from LEO'.
- Tentative Evaluation of Measurements:** A table with columns for Variable, Relevance for measuring this Variable, Operational Limitations, and Processing maturity.

Variable	Relevance for measuring this Variable	Operational Limitations	Processing maturity
Specific humidity	2-High	Coarse vertical resolution	Consolidated methodology
Precipitation intensity at surface (liquid or solid)	3-Medium	Highly indirect	Heavily model-dependent
Cloud ice effective radius	4-Useful	Highly indirect	Heavily model-dependent

OSCAR database (<http://www.wmo.int/oscar/>)

Measurement Timeline for *Solar EUV flux*

ICTSW activities / Space weather data exchange

- Use of WIS for space weather data and metadata
 - Registration of initial set of products in WIS catalogue
 - Space weather centres becoming WIS Data Collection or Production Centre (DCPC)
 - NICT (proposed by Japan)
- Data format evaluation
 - RINEX/GTEX/IONEX, GNSS-RO data, ISES formats
- Not yet addressed:
 - Review WMO metadata profile (ISO 19115)

ICTSW activities / space weather products and services

- [Space Weather product portal](#)
 - ✓ To inform potential users and demonstrate product availability
 - ✓ 40 « product collections » in 10 product categories
- Civil aviation : response to new ICAO requirements
 - Extension of the meteorological information coordinated by WMO
- Disaster risk management
 - Space weather increasingly recognized in national risk registers
 - Working on « best practices » for severe space weather warnings
- Other applications and services (GIC, GPS..): still to be addressed

CGMS

Coordination Group for Meteorological Satellites (created in 1972)

- Satellite agencies (operational or R&D) operating weather/climate/oceanographic missions in support of WMO or UNESCO/IOC programmes, + WMO, IOC
 - CMA, CNES, CNSA, ESA, EUMETSAT, IMD, JAXA, JMA, KMA, NASA, NOAA, Roscosmos, Roshydromet
- Scope:
 - Exchange technical information
 - Harmonization of mission parameters for interoperability (standards, best practices)
 - Continuity, complementarity, mutual back-up, through cooperative mission planning

CGMS and Space Weather

- Many meteorological missions of CGMS Members are flying space weather payload
- CGMS *is considering* to play an active role to support continuity and integration of space-based observations for operational Space Weather products and services.
 - Technical harmonization
 - Cooperative mission planning to ensure continuity
- Proposal to be discussed next May

Conclusions

Expected benefits of WMO's involvement

- WMO's experience and procedures (observation, information, warning systems) enable leveraging the technical coordination initiated by ISES

- WMO intergovernmental framework will facilitate international commitments by Members for long-term provision of services
- Integration/synergy can develop with meteorological information delivered to key users (Aviation, emergency managers, energy production and transport..)

Perspectives

- Complementary international initiatives
 - ISES, COSPAR, ILWS, CGMS, UN COPUOS
- ICTSW initial activities demonstrate relevance and usefulness of the WMO framework to enhance and coordinate operational space weather activities
- Real breakthrough requires more focused action
 - Long term continuity/interoperability of key observations
 - Best practices for severe event warnings
 - Space weather scales and forecast verification
 - Data sharing policy and protocols
 - Aviation and other applications
- Stronger involvement of WMO in space weather will be discussed at upcoming Council and Congress

WMO OMM

Thank you !

ICTSW Terms of Reference

Inter-Programme Coordination Team on Space Weather

- Integration of Space Weather **observations**, through review of space- and surface-based observation requirements, harmonization of sensor specifications, monitoring plans for Space Weather observation;
- Standardization and enhancement of Space Weather **data exchange and delivery through the WMO Information System (WIS)**;
- Harmonized definition of **end-products and services**, including e.g. quality assurance guidelines and emergency warning procedures, in interaction with aviation and other major application sectors;
- Encouraging the dialogue between the **research and operational** Space Weather communities.

Draft CGMS objectives for Space Weather

to support continuity and integration of space-based observations for operational Space Weather products and services.

- Keeping abreast of major user interests for operational Space Weather products and services and the related requirements that can be addressed by CGMS Members;
- Evaluating existing operational products and services in support of spacecraft operations, and recommending additional services as appropriate;
- Encouraging Space Weather monitoring missions either through dedicated satellites or through hosting space weather payloads aboard weather and climate monitoring satellites as technically appropriate;
- Supporting when relevant the dual use of sensors such as GNSS radio-occultation receivers that provide essential information for weather/climate and ionosphere;
- Fostering orbit coordination, sensor calibration and harmonization of operational sensors and data formats with a view to ensure interoperability and data consistency;
- Reporting on spacecraft anomalies and sharing the results of analyses;
- Pursuing global coordination of the operational Space Weather observing constellation, with a view to help to sustain future observing capabilities as done for terrestrial weather
- Encouraging complementarity, compatibility and possible mutual back-up in the event of system failure through cooperative mission planning,

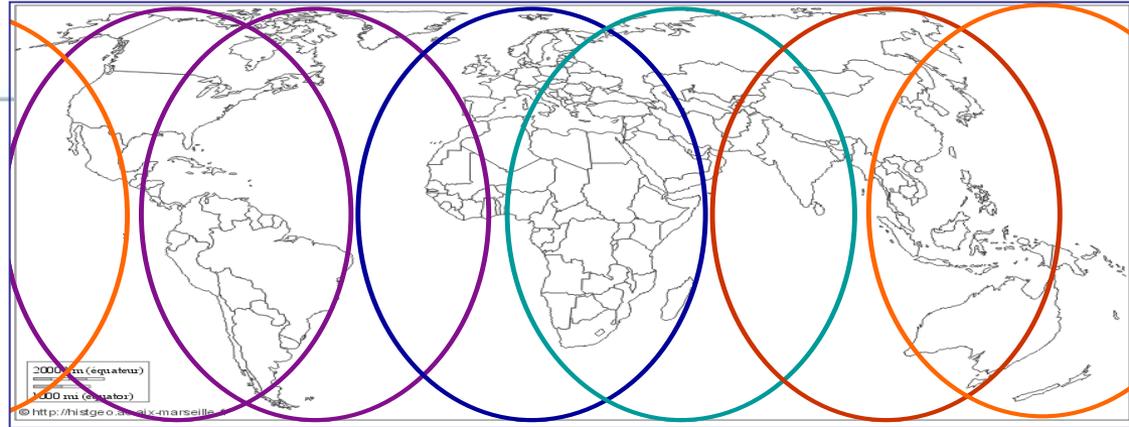

Communicating on socio-economic benefits of space weather prediction with policy makers, public, non technical community.

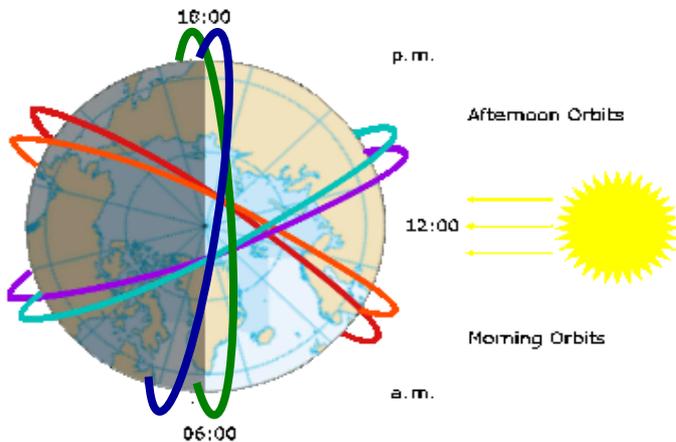

A WMO vision of the space-based global observing system

Geostationary component

- VIS/IR imagery
- IR hyperspectral
- Lightning imagers

Core sun-synchronous component imagery and sounding

Other missions/orbits:

- MW imagery
- Altimetry, scatterometry
- Radio-occultation
- Global Precipitation
- Atmospheric composition
- Earth Radiation Budget
- Multi-directional viewing IR imager
- Space weather (Solar, particles, space environment)

WMO'interest in Space Weather (1)

Space Weather affects meteorological / climate activities

- Impact on radio-communications
- Impact on meteorological satellites
- Effect on climate to be further investigated
- Coupling between ionosphere and neutral atmosphere models
